Abstract (en)
[origin: EP1122827A2] The contact socket is of single-part construction and has a base spring (1) and two spring legs (12), which are integrally formed on the base spring (1) and both spring legs (12) include contacting sections (4), facing each other where, as a result of the single-piece construction, the manufacturing process of this contact socket can be optimized and one of the spring legs (12) is supported by an additional support member (3) thereby increasing the resilient force. <IMAGE>
