Abstract (en)

[origin: EP1122840A1] The method involves applying the edges of two mold halves (9,10) to the crimpings of plug sockets where the sockets protrude at the front of a hollow volume (12) formed by the two mold halves so as to seal the hollow volume, whereby the edges (13,14) of the two halves have recesses corresponding to the plug sockets. A front housing part can be joined to the rear housing part, preferably by a latching closure. Independent claims are also included for the following: a plug holder part.
