Abstract (en)
[origin: DE19848398C1] The invention relates to a variable workstation furniture system having a furniture frame comprised of vertical columns and foot extensions, whereby the lower ends of the columns can be connected to base elements to which the front (10k, 101) and rear (30) foot extensions can be connected. The design of the foot is simplified by the parts and assembly, while enlarging the variation possibilities, in such a way that the foot extensions and the foot intermediate pieces (40) form an assembly. The front foot extensions facing the columns comprise a column receptacle (13) as a base unit which is open in an upward manner and in which a column (20) can be inserted and connected to the foot extension.
