Abstract (en)

[origin: FR2797582A1] The sachet is made from two layers of a thermoplastic material, welded together to form a pouch (3), and with the weld line (2) shaped to form an opening (4) in one of the shorter edges. The inner surface of one of the two layers in the edge containing the opening has an adhesive strip (6) 15-25 mm wide with a detachable paper covering layer which allows the pouch to be sealed.
