Abstract (en)

[origin: US6620242B1] The invention relates to a device for applying and/or spreading liquid or pasty substances for coating surfaces, especially paints, varnishes and lacquers on the surface of objects (2). The device has at least two pinions (7, 7') the axes of which are arranged substantially parallel in relation to the object's surface to be coated. The spindles are provided with circumferential brush-like spreaders (8). At least one spindle can be moved across the surface of the object, with the object being moved along the brush-like spreaders.
