Abstract (en)

[origin: WO0010907A1] This invention relates to fluid containers of the type which have an outlet in their upper part and out of which fluid can be poured by tipping the container towards the outlet. In particular, the invention relates to mechanisms for such containers including a helical baffle (14), a vent tube (10), a closure cap (6), and a movable discharge tube (7). When the container is tilted, fluid is momentarily diverted through the baffle at the initial dispensing.
