Abstract (en)

[origin: FR2784110A1] The invention concerns a method for polymerising at least one olefin in the presence of at least a catalyst comprising a sequence E-M-X wherein E represents an oxygen or sulphur atom; M represents a nickel or palladium or platinum atom; X represents a phosphorus, arsenic or antimony atom in a medium comprising a continuous liquid phase containing more than 30 wt. % of water. The method can result in a polymer latex of at least one olefin.
