Abstract (en)
[origin: WO0024207A1] A method for automatic localization of pre-defined service providers via a cellular mobile telephone system. The service providers are subscribers to a Controlling Service Provider (Regional CSP system). The method includes providing quick dialing program which is received by a current cellular telephone network (CTN) from a caller. This call is then identified and transferred to the Controlling Service Provider (Regional CSP system). The information transferred includes the particular cell in which the call has originated. The Controlling Service Provider (Regional CSP system) then invokes a cross localization program to identify another mobile subscriber from the same cell, and the call is routed to that identified mobile subscriber.
