Abstract (en)  
[origin: US2001013743A1] A mounting structure for mounting a door to a carousel of a corner cabinet, wherein the carousel has a plurality of shelves and a rotary axis, and the door is co-rotatable with the carousel and is radially movable relative thereto, the mounting structure comprising: a continuous, vertically extending casing which supports the shelves of the carousel and accommodates further component parts of the mounting structure, the casing being formed by a column which is shaped as a hollow profile and is offset from the rotary axis of the carousel; a pair of upper and lower bearing constructions rotatably supporting carousel, and a pair of cantilever arms connecting the column to each of the bearing constructions.
