Abstract (en)
[origin: DE10000709A1] Treatment of residues containing chromium(VI) compounds from chemical, metallurgical and incineration processes comprises mixing the residues with additive(s) selected from ferrous sulfate mono- to heptahydrate, ferrous chloride, ferrous ammonium sulfate mono- to heptahydrate and manganous sulfate in a medium with pH greater than 4. Treatment of residues containing chromium(VI) compounds from chemical, metallurgical and incineration processes comprises mixing the residues with additive(s) selected from ferrous sulfate mono- to heptahydrate ($\text{FeSO}_4 \cdot n\text{H}_2\text{O}$), ferrous chloride (FeCl_2), ferrous ammonium sulfate mono- to heptahydrate ($\text{Fe}(\text{NH}_4)_2(\text{SO}_4)_2 \cdot n\text{H}_2\text{O}$) and manganous sulfate (MnSO_4) $n = 1-7$ in a medium with pH greater than 4.

Abstract (de)
Um den Chrom(VI)-Gehalt von Rückständen aus chemischen, metallurgischen und Verbrennungsprozessen zu senken, wird der Rückstand mit einem oder mehreren der Stoffe Eisensulfat, Eisenchlorid, Eisenammoniumsulfat und Mangansulfat versetzt.
