Abstract (en)
[origin: EP1124091A2] A lamp has a retaining part (10,50), a lamp part (12,56) that can be positioned in different positions on the retaining part and leads (10,20) which run through the retaining part to the lamp part. The retaining part has a drag chain (30) which carries leads leading through the retaining part to the lamp part. The retaining part is a hollow profile and the drag chain is located inside the hollow profile. The retaining part has a guide (24) in which a cradle connected to the lamp part can slide. The hollow profile is a rectangular with a guide running in the longitudinal direction. The drag chain runs along the side walls of the hollow profile when the lamp part is displaced.
