Abstract (en)

[origin: WO0010398A1] The invention concerns a method of removing, in a casing factory, a substance (21) floating on a liquid (3). The surface (A) of the liquid is sprayed with a fluid in the form of jets (20) which are discharged in the direction of advancement of the guts and which form an acute angle (ϕ) with the liquid surface (A). The substance (21) is thereby set in motion by the fluid and is transported in parallel with the liquid surface (A) crosswise relative to the direction of advancement of the guts and flows over edges (8) adjacent the walls (2b) of the container (2). The invention also concerns a device for implementing the method, consisting of a fluid feeding means in the form of a pipe (5) arranged crosswise relative to the direction of advancement of the guts. The pipe is provided with several apertures (5), through which the fluid may be discharged in the form of jets (20).
