Abstract (en)
[origin: WO0115560A1] The invention relates to a device which produces a dynamic rolling walking-action (1). A conventional shoe upper (2) fixes the device to the foot. The upper can be produced from leather, textiles or other natural or synthetic materials. A purpose-designed sole causes a dynamic, rolling walking-action and can be adapted to all possible conditions. During the rolling walking action, the construction of the sole (3) and the choice of material give the user a feeling of walking barefoot in the sand with a trampoline effect.
