Abstract (en)
[origin: WO0025642A1] The present invention relates to a supporting cushion for comforting support of body parts, said cushion having a supporting area comprising a friction area, wherein the friction area is adapted to provide a frictional engagement with a supporting body part, when the cushion is supporting another body part. The cushion is preferably provided with two cushion parts provided for making contact with two opposite sides of the supporting body part. The cushion is preferably made of two layers of web material welded together, the cushion being designed for being inflatable.
