Abstract (en)

[origin: FR2784969A1] The reservoir (1) comprises closing and/or filling device including at least one obturation part (20,120). This closing part comprises a ring-shaped part (121) whose external diameter corresponds with the reservoir internal diameter. The ring-shaped part is inserted and sealed in the reservoir. A central part (22,122) comprising a bottom wall (23,123) seals closed the reservoir in the inoperative position. The bottom wall comprises a slot (24,124) which opens under the effect of a predetermined minimal pressure.
