Abstract (en)
[origin: WO9850275A1] The present invention relates to a flat interactive card of sheet material comprising front and rear panels. The panels are parallel and adjacent to each other, and are connected around at least part of their peripheries. The front panel includes an aperture formed in the front panel extending between two opposed handling regions. When the handling regions are pushed closer together, at least the front panel is deformed as the aperture opens to expose an inner area defined between the panels.
