Abstract (en)

[origin: DE19850186A1] The invention relates to a method for the subtype and/or species-comprehensive detection of HI viruses in a sample while using at least one oligonucleotide which contains at least 10 successive nucleotides from (i) a highly preserved region of the LTR region, of the gag gene or of the pol gene of HIV, (ii) of a corresponding region of another HI virus isolate, (iii) of a corresponding region of a consensus sequence stemming from a plurality of HI virus isolates or of sequences complementary thereto.
