Abstract (en)

[origin: WO0025389A1] A method and an arrangement for moving an object, such as a device (100) for electrically connecting a diverter (24) to a conductor (2) for transmitting electric energy, between a first position, in which the object is located at a distance from the conductor, and a second position, in which the object is attached to the conductor. The arrangement (31) comprises a support means (3) for contacting the conductor (2), an elongated manoeuvring member (32) connected to the support means and arranged for locating the support means on the conductor, and an elongated moving member (33), which is arranged for being supported by the support means and being connected to the object (1). The invention is also related to such a connecting device (100).
