Abstract (en)

[origin: WO0019695A1] A device for remote control of telescopes for astronomical observations, comprising one or more telescopes, each controlled by a respective computer, at least one server to which the computers are connected by means of a local area network, the server being connected to a wide-area data network in order to receive requests from users to access the one or more telescopes, the server decoding the requests and transmitting to the control computers the instructions required to actuate the telescopes according to the requirements of the users.
