Abstract (en)

[origin: DE10006661C1] The plastic strip (2) excess (a, b), which projects out relative to the adjacent flat surface (1), is largely cut away. The machined surface of the plastic strip then has a white fragmented appearance. It is wetted with multicomponent lubricant oil of high spreading capability. The remaining projection is removed with roller brushes, leaving a smooth transition between flat section and strip.

[origin: DE10006661C1] The plastic strip (2) excess (a, b), which projects out relative to the adjacent flat surface (1), is largely cut away. The machined surface of the plastic strip then has a white fragmented appearance. It is wetted with multicomponent lubricant oil of high spreading capability. The remaining projection is removed with roller brushes, leaving a smooth transition between flat section and strip.
