Abstract (en)

A packaging machine (1) for producing sealed packages (2) of a pourable food product from a tube (3) of packaging material, which is sealed longitudinally, is fed along a vertical downward path (A), is filled continuously with the food product by means of a fill conduit (5), and is gripped under pressure and sealed along equally spaced cross sections; the fill conduit (5) having, on the outside of a respective end portion (11) housed inside the tube (3) of packaging material, a pressure flange (20) having a number of transverse slits (22) dividing the flange (20) into respective tab portions (23), which are flexible by the pressure inside the tube (3) to define, for the food product, respective passages increasing gradually in section alongside an increase in pressure. <IMAGE>
