Abstract (en)
[origin: EP1125864A2] The dispenser incorporates a release (30) as a result of two successive movements (46). A barrier is released with the release-devices and blocks the operation of a first unit (2) in relation to a second unit (3) from a non-operating position. A locking element (33) and counter-element (36) have at least one counter element . The locking element comprises spaced apart first and second locking devices (37).
