Abstract (en)
The present invention concerns a device for orienting corks or bottle stoppers (3) having a tapered end portion (3'), comprising: a feeding duct (2) through which the bottle stoppers (3) arrive with random orientations; a horizontal support base (6), located at the outlet of said feeding duct (2); two transfer ducts (7a, 7b; 47b) into which the bottle stoppers are introduced in ordered manner; a seat (15) in said support base (6), capable of making the bottle stopper (3) leaving said feeding duct (2) take an upper level (6a) or a second, lower level (6b) corresponding to the up or down orientation, respectively, of the tapered end portion (3'); a translating device (9) arranged between said base (6) and said feeding duct (2) to transfer said bottle stoppers from said seat (15) to either of said transfer ducts (7a, 7b, 47b). <IMAGE>
