Abstract (en)

[origin: CA2332689A1] In a method for manufacturing a wire, particularly a sawtooth wire for all-steel sawtooth wire card clothings, in which the surface of a wire-shaped intermediate product, such as a wire already provided with sawteeth, is smoothened in an electropolishing process in an electrolyte bath containing an electrolyte, a further development is proposed in which a relative movement is produced between the electrolyte and the intermediate product during the electropolishing process.
