Abstract (en)
[origin: EP1126084A2] A machine for grinding railtrack profiles has a support frame (5) from which are suspended two grinding heads (15) angled to each other. Each end of the frame is supported on the track by a pair of conical guide wheels (7). The conical sides of the wheels are aligned with the grinding heads and the frame can be tilted in either direction to shape the profile of the track.
