Abstract (en)

[origin: EP1126112A2] The frame or casement leaf side constituent of the door-link (1) is formed by a hinge-plate (2). A filler piece (25) is contained in a hollow profile (5) positioned on the frame or casement/leaf. Connecting pins (16,17) join the hinge plate to the filler piece and are inserted through cavities (23,24) which are larger in the hollow profile's lengthwise direction (30) than the diameter of the connecting pins.
