Abstract (en)  
[origin: EP1126161A1] The system has a fuel store (8) with distributor pipe (5), and is connected via a part (13) to the injector body (7) of a fuel injection valve. The fuel store is enclosed over parts of its length by a first cover element (9), and the injector body is similarly enclosed by a second element (10). The fuel store is clamped to the injector body via the connection part and the cover elements. The two elements are in active connection via connection device (14). The end face of the fuel store is directly connected to a fuel pump. The connection part contains a fuel filter (15).
