Abstract (en)
[origin: EP1126222A2] The fireplace has a deflection passage(21,22) located in such a way that the flue gases from the closed flap in the chimney are guided downwards into the region of the combustion space(15). The deflection passage at least partially forms the rear side(15') of the combustion space and at least partially the rear wall(23) of the housing(20) of the fireplace. The deflection passage extends approximately from the upper end of the chimney(16) to the bottom(15) of the combustion space.
