Abstract (en)

A power connector and a method for mounting the same comprising at least one connector means (7;61) directly connected to a screening means (5;77) and at least one connector means (9;63,65,67) being connectable to the screening means (5;77), each via an individual component (14;69,71,73). According to this invention each component (14;69,71,73) is attached around and electrically connected to its individual connector means (9;63,65,67) and the screening means (5;77) is attached around each component (14;69,71,73) and around the at least one connector means (7;61) directly connected to the screening means (5;77), and makes contact between them when the connector is mounted. <IMAGE>
