Abstract (en)

[origin: FR2785222A1] The invention concerns a closing element (1) designed to be mounted on a member dispensing a fluid product for closing the dispensing outlet, said closing element comprising two components (11, 13), characterised in that the two components (11, 15) respectively form a substantially hard core (15) and a substantially elastic envelope (11) partially enclosing the core (15), the closing means being defined by an elastically deformable part (12) of the envelope (11) in sealed contact with the core (15).
