Abstract (en)
[origin: WO0027718A1] A sealable metal container, such as a biscuit tin (10), comprising a body (30), a lid (20) and a resilient liner (40). The liner is arranged within the body and has an extended portion, which is biased against the lid when the lid is closed onto the body of the container. The liner preferably has a folded spring configuration or is provided with a deformable bead (42), which provides the necessary biasing force to form an airtight seal.
