Abstract (en)
[origin: GB2343217A] A latch mechanism 12 including a latching detent 44 for engagement with a relatively fixed striker 14 and moveable between first and second positions, a pawl 60 moveable between a first and second position and a control member 72 moveable between a first and second position, the pawl 60 in the first position blocking displacement of the detent 44 from its first position to latch the mechanism 12 and in the second position allowing the detent to move to its second position to release the latch from engagement with the striker, the control member 72 in the first position, allowing the pawl 60 to move between its first and second positions and in the second position placing the pawl 60 in its second position.
