Abstract (en)

[origin: WO0025193A2] A user interface device for computing provides an interface display screen having both flexible and rigid structural characteristics as well as variable sizing and shaping features. These features provide large-scale visibility and ease of use with small form factor portability and comfort. The device is particularly suited to flexible, wearable and/or carryable computing environments, although it can be readily deployed in non-wearable and non-carryable computing environments.
