Abstract (en)
[origin: WO0026829A1] Apparatus for co-ordinating tasks to be executed by a computer system, including: i) a world model comprising a list of tasks, wherein each task has a timeslot associated therewith; ii) scheduling means for scheduling the tasks; and iii) execution means for effecting execution of a scheduled task, which apparatus is operable to receive and process task information such that when the task information includes a request to supply information, the scheduling means schedules execution of the request to occur in a free timeslot of the world model.
