Abstract (en)

[origin: WO0025258A1] Hand operating computer input device (1), composed of at least one input control which is characterized by a base portion (2), one to the base portion (2) fixed attached and from said base portion upright handgrip (3), which is arranged at an angle to the base portion. The aim is to place the input device within the width of the shoulder also enabling the hand, arm and shoulder to work in a more natural physiologically correct position.
