Abstract (en)

[origin: FR2785708A1] The invention concerns an installation comprising a diode array (3) having at least two operating states capable of being differentiated visually and an opaque mask (5) wherein are arranged transparent zones adapted to coincide with a selection of diodes (3) of said array, said mask being provided with identifying means for identifying said mask (5) and consequently controlling an electronic device (4) managing the operating state of said diodes (3). The installation can be placed on board a public transport vehicle, in which case the mask (5) visible surface comprises a plan representing the line serviced and the mask transparent zones are arranged at stops shown on said light display.
