Abstract (en)

[origin: EP1128013A2] The door mounting, and especially for glass doors (1), has keyed holders (6) within recesses (2) to lie flush with the surface of the glass door panel (1). They are held in place by at least one screw bond (3) at a counter unit (5), directly or indirectly at the opposite surface (4) of the glass panel (1), to give a clamping action with a force and positive fit. The counter unit (5) is covered by a hinge leg or hinge strip (7) with an opening. The hinge arm or hinge strip (7) has two elongated holes (9) through it, for holding screws (10) to pass through to lock the hinge arm or hinge strip (7) in a force and positive fit with the counter unit (5). The hinge leg or hinge strip (7) is shrouded by a cap.
