Abstract (en)

[origin: EP1128018A1] The window (1) has a rectangular outer frame, in which pivoting louvres (4) filled with insulating glass (9) are held by inner frames (10). A toothed rack slides along at least one of the lateral bars (3) of the outer frame and engages pinions (20), whose axles are connected to the louvres and form rotation axes for the louvres. The bars (2,3) of the outer frame have inner and outer elements connected by thermally insulated connecting profile strips fixed to the elements, which engage corresponding holder grooves in the elements.
