Abstract (en)

[origin: EP1128145A2] The drying method uses a drying zone through which a hot gas flow is passed, with continuous measurement of the hot gas temperature and humidity downstream of the drying zone, for regulation of the hot gas temperature supplied to the drying zone, e.g. by regulating the heat output of a combustion device (1) used for heating the hot gas. An Independent claim for a wood fibre drying device is also included.
