Abstract (en)

[origin: EP1128488A2] A high frequency connector having a main housing having an open mounting side, a cable side and a partition at the cable side defining two compartments where each compartment is in communication with the mounting side and the cable side; a plurality of contacts, where a pair of contacts are positioned in the compartments such that the contacts are exposed from mating with a complementary electrical interface on the mating side and wires of a cable on the cable side; and a rear cover that is fittable to the main housing on the cable side in order to close the open cable side and cover the exposed contacts therein where the cover further includes a second partition configured to mechanically and electrically engage the partition of the main housing where the two partitions are conductive and act as a shield between the two compartments.
