Abstract (en)  
[origin: EP1005811A1] Each of the storeys of the gallery has its own individual linear drive (18), joined to the front of the seat (6) with a screw, secured with a nut (9) and manually adjustable through an opening in the front cover. The pushing rod (16) is attached to the joint element (8) with a pivot and guided in a pipe (17), which is part of the linear drive. The linear drive operates a U-shaped tappet traverse (21), which is joined to the support columns (24) of the seat row (1,2,3,4) in front. Small tolerances after the use of the telescopic mechanism can be adjusted manually at the individual row.
