Abstract (en)

[origin: FR2785521A1] The invention concerns a device (1) comprising at least one filiform suspension cord (2), made of non-absorbable material and with limited elasticity, and at least two anchoring parts (3) linked to the ends of said cord (2); said anchoring parts (3) are made of sheet material, having a flexible and open-worked structure, capable of adapting to the configuration of the respective implanting walls, and said parts (3) are designed to be fixed to those same walls by appropriate means, such as suturing or stapling means, and to be then incorporated, by tissue rehabilitation through them, in said surfaces.
