Abstract (en)
[origin: WO0029533A1] The invention relates to aqueous detergent compositions for dishwashers, which combine advantageous rheological properties (fluidity, ease of discharge of product residues, etc.), advantageous product properties (appearance, cleaning power, storage stability, etc.) and an ability to be produced in a cost effective way, without any technical problem. The inventive compositions contain, in addition to further detergent components, from 20 to 50 % by weight of one or more water-soluble additives as well as from 10 to 50 % by weight of one or more liquid, water-soluble and non-surface active binders.
