Abstract (en)

[origin: WO0028776A1] The invention relates to a method for operating transmitter and receiver units in a control system for one or several rooms in a building. In order to ensure power-optimized activation for each receiver unit in the control system, one or each receiver unit is activated at a specific interval in time, whereby said interval in time is synchronized with a transmission cycle of a corresponding transmission unit. One or each transmission unit transmits a synchronization signal to one or each receiver unit, containing information relating to the interval in time when data signals are transmitted.
