Abstract (en)
A ceramic mould loading device, comprising a loading carriage (2) which is provided with a compartment (7) for filling the at least one forming cavity (4) of a ceramic mould positioned on a press, and is driven with horizontal reciprocating rectilinear movement between a withdrawn position in which it disposes said compartment below a hopper (9) for supplying at least one base material in powder form, and an advanced position in which it disposes said compartment above said at least one mould cavity, in front of said compartment there being provided at least one distributor unit (14-18), which is arranged to deposit, on at least a part of the plan profile of said at least one mould cavity, a desired quantity of at least one finishing powder material. <IMAGE>
