Abstract (en)

[origin: EP1129847A1] The electric drive mechanism has a stator (16), and rotor (14) sitting on the cylinder-axle (12). The stator extends over only part of the rotor's periphery and forms a linear drive unit. The rotor's outer peripheral rim part (18) at least consists of electrically conductive material. The stator has coil-packs (22) on each side of the rotor.
