Abstract (en)

[origin: EP1129952A2] The container manufacturing method has an aluminum foil (11) provided with raised printing or embossed areas, before application to the mantle surface of the container (4), which can be heated to a temperature of between 120 and 180 degrees, for activating a thermo-adhesive applied to the rear surface of the foil. An independent claim for a printed container manufacturing device is also included.
