Abstract (en)

[origin: EP1129960A1] A container of flexible material, obtained by successive folding and sealing of a sheet material (2) comprising at least two layers (3, 4) coupled to one another by means of adhesive (20), said container being provided with an upright top edge (8), in which a handle (11) is made by punching, an uncoupled area (23; 123) being provided around said handle (11), in order to increase resistance to tearing when stress is applied by gripping the handle. <IMAGE>
