Abstract (en)
[origin: EP1130192A2] The shuttering panel (1) comprises two plates (2) which are joined to one another by means of a core (3) of hard foam material, and consist of a dense, wear and moisture resistant material, with the panel edges provided with a cover (7) consisting of a dense elastic material. Also claimed is a method for producing such a panel. It involves positioning of plastic grids between the plates (2), foaming the place between these plates, and applying a liquid hardenable material to the panel edges.
