Abstract (en)
[origin: EP1130200A2] The door or window lock consists of a locking part (11) on the casement or leaf side, and a frame-side bolt-holder (15). The locking part comprises a bolt (19) turning on a pivot axle (33) by means of a control (25) which also operates the door or window locking mechanism. A lock protects the control from unauthorized use. The bolt-holder has a bolt opening for taking the free end (65) of the bolt. The distance (63) between the free end of the bolt and the pivot axle can be altered and fixed by a fixture (41). The bolt consists of a basic element (39) and an extension element (43).
